

AirMini™

The portable therapy device you've been waiting for

AirMini, the world's smallest CPAP, delivers the type of high-quality therapy patients trust in our market-leading AirSense™ 10 bedside devices. Leveraging the same proven algorithms and a range of new technologies aimed at providing quiet and effective therapy, AirMini sets a new standard for portable CPAP performance.

- **ActiveAir™** This crucial technology caps therapy flow while still increasing therapy pressure, which allows the system to be smaller, quieter and more efficient without compromising on therapy delivery or pressure swings.
- **HumidX™ and HumidX Plus.¹** Our waterless humidification system is unique in that it allows exhaled air to pass through before it reaches the mask's vent. This ensures minimal heat and moisture loss and allows HumidX and HumidX Plus to deliver effective humidification.
- **A complete system.** The AirMini device, optimized AirFit™ mask, AirMini app and optional accessories including travel bag and bed caddy give patients the freedom to leave their bedside setup at home.

HumidX Plus
Optimized for dry climates and high altitude environments where humidity levels are very low, e.g. aircraft.

HumidX
ResMed's standard waterless humidification system, designed for most climates and sleep environments.

¹ Compatible with AirFit N20 and P10 for AirMini masks
